CSS Layout Handbook

Mentoro study notes

Box model

Every element is content, padding, border and margin. Set box-sizing: border-box globally.

Flexbox

One dimensional layout. Use justify-content for the main axis and align-items for the cross axis.

Grid

Two dimensional layout. Define tracks with grid-template-columns and place items with areas or lines.

Responsive design

Start mobile first, then add min-width media queries. Use relative units like rem and %.
