JavaScript ES6+ Essentials

Mentoro study notes

let and const

Prefer const. Use let only when the variable is reassigned. Both are block scoped.

Arrow functions

Shorter syntax and lexical this. Avoid them for object methods that rely on this.

Destructuring and spread

Pull values out of objects and arrays and copy or merge them without mutation.

Promises and async/await

Write asynchronous code that reads top to bottom. Always handle errors with try/catch.

Modules

Split code with import and export. Keep one responsibility per file.
